Sukit Chowandee (Art)

Programmer

Passionate front-end developer with a solid computer science background and experience building responsive, user-friendly interfaces using modern web technologies. Currently expanding skills in back-end development to become a versatile full-stack developer.
Dedicated to continuous learning, problem-solving, and collaboration to deliver scalable solutions. I aim to leverage my technical expertise and creativity to contribute effectively to organizational success and impactful projects.

Education

2014-2018

Bachelor's Degree, Burapha University

Computer Science

- Developed an overload teaching workload management system as a final year project using Angular, Node.js, Express.js, and MongoDB.

Experience

January 2020 - April 2022

Taamkru Ltd.

Position: Web Application Developer – React.js

Projects:

- Employee Management System
- Canteen Management System
- EQ and SDQ Assessment Tools
- Home Visit Tracking System

Responsibilities:

- Reviewed and validated UI/UX design consistency across the application.
- Verified API responses to ensure alignment with design and functional requirements.
- Estimated man-days for feature development and task planning.
- Developed responsive web applications using React.js.
- Integrated frontend components with GraphQL APIs.

May 2022 - Present

CNES-Consulting Co.,Ltd
Position: Front - End Developer

Developed with Flutter:

- Application Yaphrom: Developed features as assigned, focusing on UI, performance, and maintainability; implemented BLoC State Management for consistent and scalable state handling across the application.
- Application Kidscare Plus: Continued development using Flutter version 2, and later migrated to Flutter version 3 to leverage newer features and ensure long-term maintainability; implemented BLoC State Management to manage complex state logic efficiently and maintain scalable architecture.
- KMA Application: Deployed by the company as an outsourced developer to contribute to the development of a mobile banking application (Krungsri Bank); utilized Riverpod for modern and scalable state management to support complex banking functionalities and secure transactions.

Developed with Nuxt.js:

Projects:

- Web Admin and Web Owner Kidscare Plus
- Sikarin Hospital System
- Thailand National Health Cloud System (SSO)
- Sugarcane Management System (KBS)

Responsibilities:

- Took over and maintained existing projects, implementing improvements and modifications based on additional requirements. All projects were integrated using RESTful APIs.
